

Lifeline Tactical Rescue Tools provide a "first-line" self extrication tool for Special Operations Forces operating in the most dangerous and challenging areas around the globe. From cutting through wires and debris in confined spaces, to gaining window access through a submerged vehicle, this tool provides the individual operator the means to get out of dangerous situations quickly.

Not a knife, a multi-purpose, proprietary cutting tool specifically designed to get you out so you can get your teammates out. This tool cuts through cables, laminated glass, seatbelts, webbing and anything your standard blade can't.

The tool is generally worn on the upper chest area for instant immediate access.

Where 911 doesn't exist this tool thrives so you survive.

SAVING LIVES BY DESIGN

WHERE 911 DOESN'T EXIST LIFELINE SELF-RESCUE TOOLS THRIVE SO YOU SURVIVE.
